Bridging the gap between how founders think and what investors need to see

First Update - March 17 2026

4SIGHT

Founders speak vision...

- Building financial projections **requires finance expertise** most early founders don't have
- Generic spreadsheet tools **force founders to think like CFOs**, not builders
- Great business **ideas get lost in translation** when it's time to talk to investors

...while Investors speak numbers

- Early-stage decks arrive with **inconsistent, hard-to-compare financial models**
- Investors **spend disproportionate time** extracting the 3-4 metrics that actually matter
- Poor financial storytelling causes **promising startups to get passed over**

THE GAP ISN'T AMBITION. IT'S COMMUNICATION

STARTUPS' FINANCIAL BRAIN

For Founders: No spreadsheets. No finance degree. Just focus on building and 4sight will handle the rest

For Investors: Consistent, comparable, insight-forward reports without messy digging

Real-time market comparables, industry benchmarks, and dynamic assumptions built in automatically

[1. DESCRIBE]

Founders answer conversational questions about their business

[2. BUILD]

AI models the business using comparables and personalized assumptions; Feedback loop is always open

[3. SHARE]

Investor-ready data and KPIs get generated instantly through relevant dashboards and reports

Customer discovery shows that the opportunity is broader than we thought

	Founders	Investors
Founders undervalue the importance of financials	"Finance doesn't matter at our stage. What matters is the story."	"To us, the numbers *are* the story."
The assumptions are harder than the model	"How do I show logic behind my growth projections?"	"The reasoning behind the assumptions matters the most."
Explaining the model is time consuming	"I have to answer the same questions over and over."	"It takes me longer to understand their model than to make my own. I wish all founders had an FAQ doc."
AI is good for drafting, but it is hard to make precise edits	"AI can build a good draft, but when I need to tweak the model details it's hard to track the changes."	"AI models make it even harder to see where the assumptions came from."

Takeaway: The pain points around understanding assumptions, tracking changes, and making precise edits shows a need for better spreadsheet tools (e.g., "Cursor for Excel") rather than a "Turbotax for startups."

THE MARKET IS BIGGER THAN JUST FOUNDERS

Every analyst, banker, consultant, and CFO lives in Excel. They all have the same problem.

1.1B

Excel users worldwide

$20-200

Cursor charges per user per month

$264B+

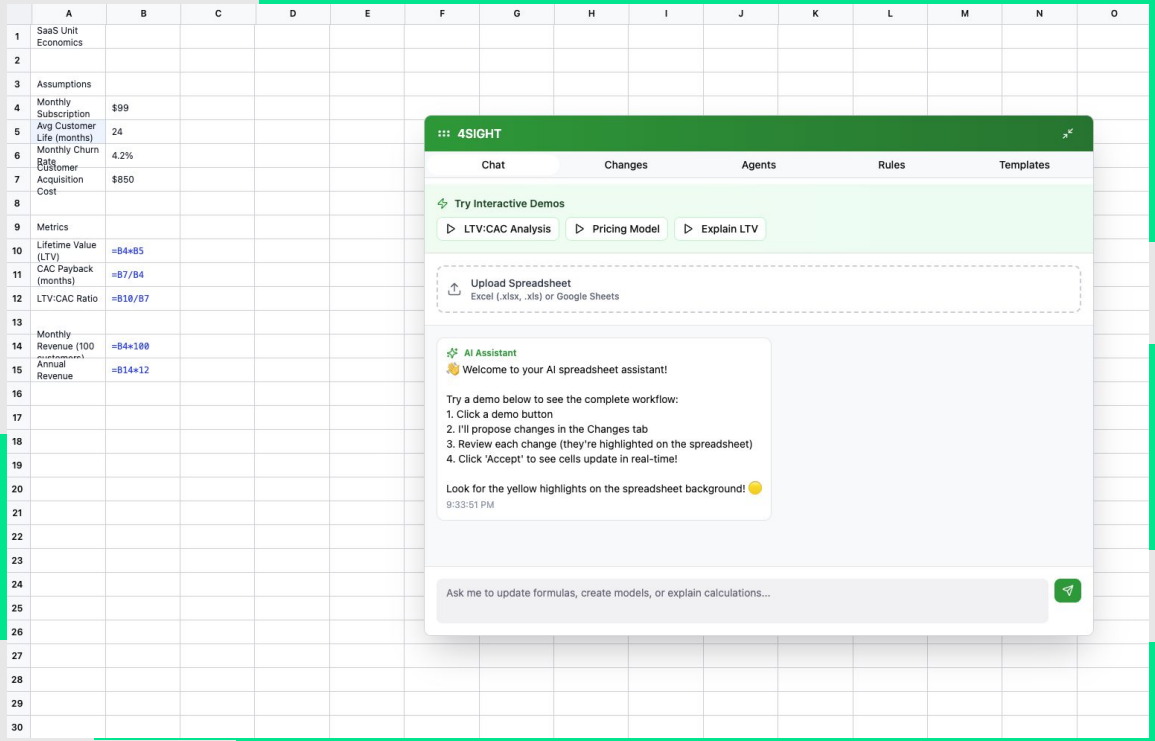
Addressable market

4SIGHT: CURSOR FOR EXCEL

Claude/ChatGPT: Generates a full model in seconds. Looks great, but you can't see what changed, can't tweak one cell, and can't trust the assumptions.

Raw Excel: You have full control, but you need hours and a finance degree to build something good.

4Sight: AI overlay that sits on top of Excel/Sheets and controls your mouse and keyboard to make changes.

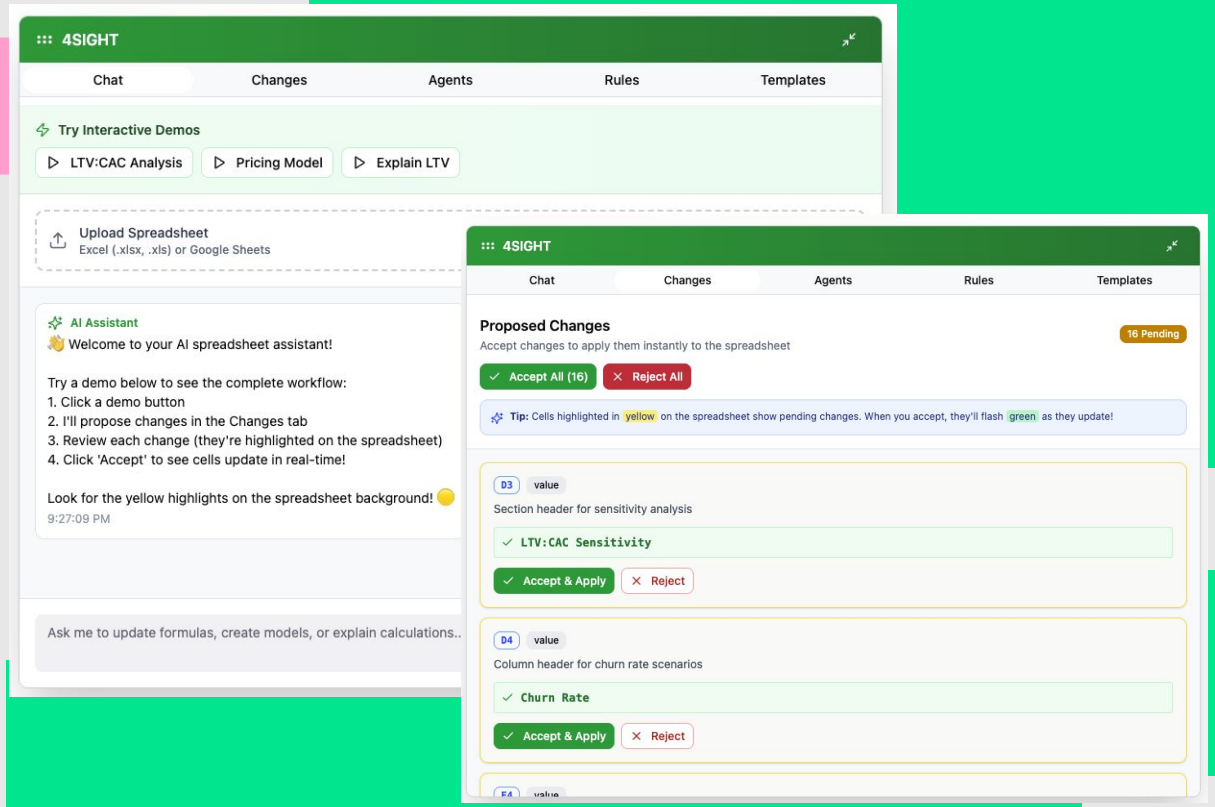


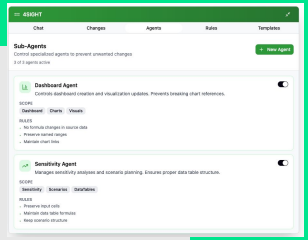
FIXING EXCEL

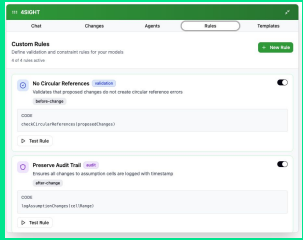
Chat - Talk to your spreadsheet like a person. No formulas, no finance degree.

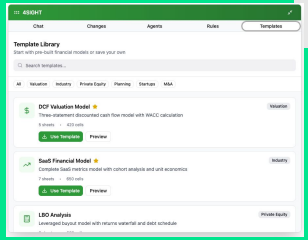
Changes - See every edit before it happens. Accept, reject, or rethink cell by cell, like a code diff.

Use Agents, Set Custom **Rules**, Use Professional **Templates**, and more...









WHY NOW

01

AI agents can now control a screen

Clawdbot proved that people are okay with an AI agent managing their computer.

02

Cursor proved the market

Cursor just raised $2.3B at a $29B valuation. Developers paid $20-100/month for a better IDE. Finance professionals will pay the same for a better spreadsheet.

03

The gap is wide open

Every founder is already using ChatGPT to draft models. Nobody has solved precise editing, diffs, and auditability. That is 4Sight.

FOUNDERS FIRST.

THEN EVERYONE ELSE.

PHASE 1

Founders

Early-stage founders building their first financial models to raise. 4Sight as their guide to advanced financial modeling.

PHASE 2

Finance Teams

Analysts, bankers, FP&A teams who run Excel 8 hours a day. Same product, bigger wallet.

PHASE 3

Enterprise

Any company using spreadsheets.

WE ARE BUILDING

THE CURSOR FOR EXCEL.

Cursor raised $2.3B at a $29B valuation. The Excel market is **40x** bigger than coding.

RAISING

$500K

Pre-seed

THANK YOU!

It’s time to fix Excel.
